## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

## Contact and Corrective Action Comments:

The Temperature Blank temperature for shipping container 1 was 2.2°C, shipping container 2 was 5.1°C, shipping container 3 was 0.9°C, shipping container 4 was 1.1°C, shipping container 5 was 2.4°C and shipping container 6 was 0.8°C.

The containers for DUP-3 were preserved incorrectly. Client resampled the containers for Metals and Nutrients. The sample ID on the COC is GS-29S4 and the ID on the container is GS-29SR. Used ID per the COC.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

## Contact and Corrective Action Comments:

The Temperature Blank temperature for shipping container 1 was 1.3°C, shipping container 2 was 0.4°C, shipping container 3 was 0.1°C.

### Comments

Please do not use any "EB" or "FB" samples for MS/MSD.  
 DUP-3 from the COC delivered on 8/18 had mis-preserved Nitrate+Nitrite and Dissolved Metals containers. The well was re-sampled for these analyses, but the shipment was sent before the containers could be switched out. They are included on this COC.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

## Contact and Corrective Action Comments:

The Temperature Blank temperature for shipping container 1 was 3.3°C, shipping container 2 was 4.0°C, shipping container 3 was 1.7°C, shipping container 4 was 1.2°C and shipping container 5 was 3.1°C.

## CASE NARRATIVE

---

Tests associated with analyst identified as ELI-CA were subcontracted to Energy Laboratories, 2393 Salt Creek Hwy., Casper, WY, EPA Number WY00002.

Samples with DOC results greater than the TOC results were re-analyzed, the labels on them were checked and verified, and the results were duplicated in laboratory. RRS 09112023

For this workorder, there were several samples, where at least one Dissolved metal was higher than the corresponding Total / Total Recoverable metal. These results were all confirmed by re-analysis or duplicate analysis. RRS 09112023

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

## Contact and Corrective Action Comments:

Samples received in coolers 1 and 2. The Temperature Blank temperature for shipping container 1 was 4.0°C and shipping container 2 was 1.1°C.

No date/time on 1 liter unpreserved container for PMP-12, used information from COC. wjj 8/23/2023

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

## Contact and Corrective Action Comments:

The Temperature Blank temperature for shipping container shipping container 3 was 0.1°C, shipping container 4 was 0.2°C, shipping container 5 was 1.3°C and shipping container 6 was 3.6°C. All samples came from shipping containers 3 through 6.

Sample containers Dup 4 both are marked as unfiltered, however, the label for one says filtered and upon observing the sample, one does have particulate in one of the bottles. They were labeled appropriately as filtered and dissolved.

## CASE NARRATIVE

---

Tests associated with analyst identified as ELI-CA were subcontracted to Energy Laboratories, 2393 Salt Creek Hwy., Casper, WY, EPA Number WY00002.

Per J. Garza this report was revised to make the following correction: Sample ID for -001 was changed from MH-MSD106 to MH-MSD108. The sample checklist comments were also updated to clarify incorrect preservation of nutrient containers with phosphoric acid per client COC. No other data has been changed. RRS 12082023

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

## Contact and Corrective Action Comments:

Per client COC the sample containers for Nutrients were preserved with Phosphoric acid prior to receipt at the laboratory. The laboratory was unable to determine which samples this impacted. All samples for Nutrients were then subsampled and preserved to pH <2 with 2 mL of sulfuric acid per 250 mL in the laboratory upon receipt. Samples for DOC and TOC were still able to be analyzed despite being sulfuric acid preserved. The sample ID on the containers is MH-MSD108 and on the COC it is MH-MSD106. Used ID provided on the COC. tj

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

## Contact and Corrective Action Comments:

Sample container states MH-MSD108. COC states MH-MSD106, client notified to determine which ID is correct. wjj 11/15/2023

Per J. Garza it should be MH-MSD108. wjj 11/15/2023
